PROFILE

An experienced IT professional currently looking for an entry-level role as a Full Stack Web Developer. Highly proficient in Java, Javascript, C#, Swift, HTML/CSS, SQL, Ruby on Rails, and JQuery. Past career in the sector includes specialization in software development, network infrastructure and 3rd party applications. I am looking to transition to web and application development to bring together my creativity and programming skills. Looking forward to the opportunity to learn and apply new technologies to my skillset and work.

EXPERIENCE

IMS Health (Previously Cegedim)

A global information and technology services company providing clients in the healthcare industry with end-to-end solutions to measure and improve their performance.

Infrastructure and Marketing Support Specialist, 2011 - 2016

Responsible for management of database and technical projects as the lead IT advisor in a client-facing role. Clients included senior management sales and marketing professionals in the pharmaceutical industry.

- Successfully designed and created application and database solutions to meet and exceed client expectations for targeted sales and marketing related campaigns
- Develop application to support quality assurance and success metrics reporting
- Streamlined internal technical processes to improve efficiency and reduce processing time

Programmer Analyst, 2008 - 2011

Responsible for maintaining and supporting a proprietary mobile customer relationship management solution for two major pharmaceutical companies, Abbot and Basilea.

- Effectively developed, tested and implemented new software development solutions to support increased business targets
- Oversaw territory alignments and deployment of new modules and features (ex. inventory tracking and email notifications) to enhance efficiency and effectiveness of products

EDUCATION & CERTIFICATION

Bitmaker (2016) Web Development

9-week immersive course in web development (SQL, HTML/CSS, JavaScript, JQuery, Ruby on Rails)

Seneca College (2008-2012)

Computer Programming diploma (with Honours) (C++, C#, Java, Perl, Cobol)

RECENT DEVELOPMENT PROJECTS

In The Dark Show (www.inthedarkshow.com)

Online presence for actor Jason Bryden. The solution has a blog component and hosts podcast- In the Dark. The site is made in Wordpress using Divi and custom CSS for the styling. The podcast is currently hosted on iTunes via an RSS Feed.

Gander and Goose (www.ganderandgoose.com)

Gander and Goose is an online retailer that creates eco-friendly wood products for children. The solution was created in Rapidweaver and uses Paypal for online payment services.

Band Aide (www.bandaide.herokuapp.com)

Created platform to help local musicians meet other musicians and form new bands. The solution was built in Ruby on Rails along with Devise for login/sessions, Carrierwave and Minimagick for image uploads and Geocoder for location services.
